#### India on brink of worst-ever water crisis

India is suffering from the worst water crisis in its history with some 600 million people facing acute water shortage. The crisis will worsen as demand is projected to be twice the available supply by 2030

#### MODI GOVERNMENT IN MISSION MODE TO ENSURE HAR GHAR JAL BY 2024

PM Modi laid the foundation stone for the Manipur Water Supply Project

- The Mission aims to provide Freshwater Household Tap Connections (FHTCs) in 25 towns and 1,731 rural habitations in Greater Imphal
- This project will benefit 2,80,756 families in 16 districts of Manipur
- The Manipur Water Supply Project is being implemented at a cost of Rs. 3000 crore

### Evolution of state rankings over time for north-eastern and Himalayan states based on Water Index composite scores (FY 15-16, FY 16-17, FY 17-18)

| North-eastern and Himalayan states | FY 2017-18 | FY 2016-17     | FY 2015-16     |  |
|------------------------------------|------------|----------------|----------------|--|
| Himachal Pradesh                   | 1          | 2              |                |  |
| Uttarakand                         | 2          | 6              | 4              |  |
| Tripura                            | 3          | 1              | 2              |  |
| Assam                              | 4          | 4              | 5              |  |
| Sikkim                             | 5          | 3              | 3              |  |
| Nagaland                           | 6          | 5              | 6              |  |
| Meghalaya                          | 7          | 7              | 7              |  |
| Arunachal Pradesh*                 | 8          | Not applicable | Not applicable |  |

\*Excludes Arunachal Pradesh as it was not assessed on the Index for FY 15-16 and FY 16-17, and therefore previous year comparisons could not be made.

https://pib.gov.in/PressReleaseIframePage.aspx?PRID=1582772

#### NAGALAND

- Nagaland receives very high rainfall where the average annual rainfall is around 250 cm to 300 cm. we receive rainfall for seven long months i.e. from April to October.
- Most villages in Nagaland were established at hill tops to improve their security.
- These villages drew drinking water from surface sources, either by gravity or by pumping.
- Catchment areas of such water sources were small and delicate.
- With unabated destruction of forests due to logging, Jhum cultivation and other human activities, the problem of diminishing water quantity at these sources is a real threat.
- Measures like afforestation to conserve the natural environment of the areas where water collects, construction of small structures to stop flowing water and increase its percolation in the soil and tapping of groundwater can be explored.
- Presence of chemical contamination in ground water need to be tackled through appropriate cost effective technology.

60% of rural population without piped water supply in Nagaland

In this file photo, people wait in queue to collect water from a well at Dzüvürü colony in Kohima.

https://morungexpress.com/water-scarcity-nagaland-and-itspanacea#:~:text=However%2C%20Nagaland%20is%20one%20among,it%20for%20the%20rainy%20days

#### Meghalaya, the wettest place on Earth

The state receives 2818 millimetres of average annual rainfall.

#### KEY FEATURES OF MEGHALAYA'S DRAFT WATER POLICY

INCLUDES MEASURES SUCH AS RAINWATER HARVESTING SYSTEMS, CHECK DAMS AND MAINTAINING THE QUALITY OF GROUNDWATER

3

FOCUSSES ON COMMUNITY PARTICIPATION— INCREASING PUBLIC CONSCIOUSNESS BY DEVELOPING A UNIFIED PERSPECTIVE

THE POLICY HOPES TO REACH THE ENTIRE COMMUNITY, INCLUDING VILLAGES. INCLUSIVE STEP TOWARDS SUSTAINABLE DEVELOPMENT.

WATER POLICY, MECHALAYA

# What's making the water in Shillong oily and undrinkable?

July 9, 2019 Linda Chhakchhuak

DRINKING WATER CONTAMINATION IN SHILLONG

The reservoir at Mawphlang. Pic: Flickr/CC BY 2.0

- Rivers are being polluted by unchecked sand mining, quarrying, rapid urbanization and other "developmental' activities in the ecologically sensitive regions of this hilly state, causing a deterioration in water quality
- The resultant high turbidity due to heavy presence of soil and other particles in the once pure rivers and springs means more chemicals have to be used to make the water fit for drinking.

One of the key components of community participation would involve payment for environmental services (PES) based on the "beneficiary pays" principle". The PES model would be adopted and implemented by upstream and downstream communities for conserving water resources and revitalising the catchment upstream and stopping further degradation

https://india.mongabay.com/2019/08/cadre-of-community-professionals-to-help-implement-meghalayas-water-policy/

#### TRIPURA

Annual rainfall ranges from 1922 mm to 2855 mm. The rainfall generally increases from south-west to north-east.

- Reports received from Amarpur, Kumarghat and Teliamura said that with the advent of the dry season, people are facing a serious crisis as in most of the places, sources of drinking water are not working.
- In some areas, the government is supplying water through tankers but these are too inadequate compared to the demand.
- Often reports are coming about disputes among the villagers over a collection of water.

https://www.sentinelassam.com/north-east-india-news/tripura-news/coronavirusovershadows-severe-drinking-water-crisis-in-tripura/?infinitescroll=1

http://trpenvis.nic.in/test/water.html

Although Mizoram receives an annual rainfall of about 254 centimetre, people living on the hill tops usually suffer from water scarcity as the rain water runs off quickly.

- In recent years, increased temperature and rainfall variations due to climate change have worsened the degradation of water catchments because of accelerated soil erosion and surface water runoff.
- Combined with mismanagement of water resources, a lack of regulatory framework and growing demand, water bodies in Mizoram are increasingly drying up or becoming seasonal, leading to acute shortage, particularly from November to March.

### Revive springs for water security in Mizoram

by Vijeta Rattani, Indrani Phukan | Jan 24, 2020

Community-led watershed management in climate-vulnerable Mizoram can ensure water security during the lean season

Many villages in the mountainous areas of Mizoram face acute water scarcity in the dry season (Photo by Flickr)

# A health crisis

 Forty-five per cent of India's children are stunted and 600,000 children under the age of five die each year, largely because of inadequate water supply and poor sanitation. (UNICEF, FAO)

# An economic crisis

Loss of productivity to water and sanitation related diseases costs many countries up to 5% of GDP (WHO 2012)

### A women's crisis

Women spend 150 million workdays every year for fetching water (UN Water)

### An education crisis

Children are often responsible for collecting water to help their families.

# A hunger crisis

The Global hunger index 2020 report has placed India at 94<sup>th</sup> position among 107 countries

#### What we have? – A rich traditional water management knowledge

### Zabo System- Nagaland

- Dabo means 'impounding run-off'.
- Also known as the ruza system
- Combines water conservation with forestry, agriculture and animal care and promotes soil management, environmental protection and sustainable water management.

### **Bamboo Drip Irrigation - Meghalaya**

Over 200 years old tradition

Harnessing forces of gravity

Holed bamboo shoots zig-zag downhill, diverting the natural flow of streams and springs across terraced cropland.

Advantages of using bamboo are two-fold-

- prevents leakage, increasing crop yield with less water
- makes use of natural, local, and inexpensive material

Bamboo drip irrigation system (Extracted from Dying Wisdom (1997))

# **Rainwater harvesting**

https://force.org.in/blue-india-program/rain-water-harvesting/

### The catchments

- The catchment is a structure or land area that is used to collect rainwater and drain run-off.
- Can be either paved (roofs, courtyards, roads, etc) or unpaved (lawns, playgrounds, open spaces, etc).

Rainwater harvesting and management of water in steep slopes for cultivation.-Along (Aalo) district headquarter of West Siang District, Arunachal Pradesh.

# Action:

# How can NYK Youth fellows contribute?

- Public awareness and sensitization
  - Posters, banners and other publicity material
  - Street plays, songs and Slogans
  - Awareness on Traditional Water Wisdom using Folk Performers Bahurupiya, Acrobats

https://www.youtube.com/watch?v=JEkPS5m8rBY

– Walking the tight rope for water

https://www.youtube.com/watch?v=4qgbJ0vfn-Y

### Resource Mapping - Major Water Repositories with GPS points – Geotag app

Traditional water

bodies

- Man-made reservoirs
- Lakes and rivers
- Springs
- Forests, fields
- Wetlands

## Documentation

- Government schemes to promote water conservation –RWH and revival of traditional ponds
- Basic Data on the village visited (Google forms) <u>https://forms.gle/HXardnSM1zGNx7Cv8</u>
  - Name of the state, district and village
  - Name and contact number of the youth fellow
  - Name and contact of Sarpanch
  - Number of Houses
  - Population
  - Public buildings School, Panchayat office, Community Center, Primary health care center
  - Average rainfall
  - Soil type (Sandy, Loamy, Clayey, Mixed)
  - Topography (Plain/ Hilly)
  - Number of ponds/lakes/wetlands/well/government borewells and condition (clean, silted, filled with garbage)
  - Water User Association /Jal Samiti/Pani Panchayat/ Other groups details if present

# Establishing an Information Center

- Jal Shakti Kendra/ Water Knowledge Center
  - One stop information hub on water conservation (A helpline number)
    - Who to approach for Rainwater harvesting?
    - What will be the cost?
    - How much water can I harvest ?
    - Any support from the government?
    - Any information manual?
    - How do I maintain the structure? etc

We cannot solve our problems with the same thinking we used when we created them.

- Albert Enstein
